

Exercise for day 10

Exercise - Combining register data with other data sources

Use the research questions from day 1 of the course:

https://hrr.w.uib.no/files/2019/10/Exercise_Monday_afternoon.pdf

1. After having been through the course, do you have any new ideas for study design now?
2. Are there any other data which might be combined with register data to create new insight?
How would this change the study design compared to the “register-only” project?
3. Would you include the same population as in the “register-only” project?
4. Is the study feasible regarding ethical aspects? Would you need new consent forms for the new study?
